[Margin: Eta.]

(our author fays) it would be difficult to make people, who have never engaged in this enterprise, ~~company hend~~ **comprehend** all the ~~oblidies~~ **obstacles** they had to encounter. This cone (the little mountain mentioned by Sir William ~~Flamman)~~ **Hamilton)** is composed of ~~the very hand,~~ **ashes, fand,** and ~~postsecondary throw~~ **pozzolano, thrown** up ~~a~~ **at** different times by the volcano. The ~~marterials~~ **materials** are ~~lo boic,~~ **so loose,** that the ~~adventures~~ **adventurous** traveller ~~links~~ **sinks** about ~~midly as~~ **mid-leg at** every ~~May,~~ **step,** and is ~~to contain~~ **in constant** terror of being ~~feallowed~~ **walled** up. ~~Ask had,~~ **At last,** when the ~~funumis~~ **fumnit** is reached, the fulphureous ~~exalations,~~ **exhalations,** which are ~~contivirtually entirely due~~ **continually emitted from** the pores of the ~~mountains, bravaten fluctuation,~~ **mountain, threaten suffocation,** and irritate the ~~forces~~ **faces** and lungs in such a manner as to produce a very troublesome and ~~inci-fant onego.~~ **incipient cough.** The ~~Informed~~ **loofenes** of the ~~fish,~~ **foil,** which gives way under the feet, ~~obliger~~ **obliges** the traveller, every now and then, to throw himself flat on his ~~body, like to be~~ **belly, that he** may be in ~~left~~ **less** danger of ~~fishing.~~ **sinking.** In this pollute our author viewed the wide unfathomable gulph in the middle of the ~~territory;~~ **crater;** but could ~~otherwise~~ **discover** nothing ~~as caps~~ **except** a cloud of smoke, which ~~lifted~~ **issued** from a number of ~~final aperture~~ **small apertures** scattered all around, and accompanied with a kind of ~~mind.~~ **noife.** Another and ~~one hundred~~ **more dreadful** found, however, ~~ifles~~ **issues** from the ~~brews~~ **bowels** of the ~~redama,~~ **volcano,** and which, according to our ~~authors. "It rinks~~ **author, "frikes** the heart with ~~terms,~~ **terror,** for that all the strength of ~~protein~~ **reafon** is ~~rectifprey~~ **neceffary** to prevent the ~~obelover~~ **obfverer** from flying with ~~precipiation~~ **precipitation** from ~~facts~~ **fuch** a ~~deadlial~~ **dreadful** place." Several ~~travelleys~~ **travellers** who ~~blindsifted into come~~ **had visited this cone** before him, were ~~to er-ified~~ **so terrified** by ~~their,~~ **the** dreadful ~~friends,~~ **founds,** that they fled with the ~~stmad hate~~ **utmost haste** till they arrived at the foot of the mountain. Our author compares thefe ~~funds~~ **founds** to a ~~discharge~~ **difcharge** of ~~common~~ **cannon** in the ~~few days,~~ **wide abysfs; the noife of which** is ~~no roof of which, is the believed~~ **rebellowed** throughout all the ~~cavears,~~ **caverns,** and ~~produces~~ **produce a** found perhaps the moft alarming that can be imagined; and during the ~~short faces~~ **fhort fpace** in which ~~the illensary, real~~ **he lifted, feveral** of ~~their discifery~~ **thefe difcharges** were heard to follow one another almost uninterruptedly. This ~~deadline note~~ **dreadful noise,** our author, with very great probability, ~~fuppaid~~ **supposes** to be occasioned by the ~~esplofons~~ **explosions** of the internal fire, or, as he calls ~~is,~~ **it,** the focus of the ~~volume,~~ **volcano;** which, ~~filking squall~~ **striking against** the ~~files~~ **sides** of ~~their domestic cavares,~~ **these immense caverns,** the ~~found products~~ **sounds produced** are ~~received~~ **re-echoed** through their cavities, and probably multiplied in an extraordinary ~~memory. It is~~ **manner; and** that ~~most~~ **what** would be only a flight ~~explulsion~~ **explosion** in the open air, ~~occasional random~~ **occasions a sound** more tremendous than the ~~bonds~~ **loudest** thunder. To ~~fuch~~ **such** as ~~any convicted~~ **are convinced** of this, and ~~her full chance range so craft~~ **have sufficient courage to revisit** the first ~~imprisonments~~ **impressions** which ~~thefeo found muffaavably oscure,~~ **these founds must unavoidably occasion,** they will in a ~~floor~~ **short** time not only appear exceedingly ~~fashion,~~ **sublime,** but, by their ~~society~~ **variety,** even ~~those... what~~ **fore-what** agreeable. ~~"They~~ **They** enable us ~~(days~~ **(says** our author) to form ~~four core~~ **some** conception of the ~~fascination which, why my muffa país~~ **space through which they must pass** before they ~~were~~ **reach** the ~~ear,~~ **ear,** and of the ~~valt extend~~ **vast extent** and width of the hollows of the ~~mountain." Hinry~~ **mountain. Having** for ~~four~~ **some** time ~~time completed the avulla fpeetudo,~~ **contemplated this awful spectacle,** our author ~~whiled~~ **wished** to ~~matches~~ **measure** the ~~water~~ **crater** by walking ~~sound it's hot~~ **round it; but** found this ~~impulble.~~ **impassible.** On the north ~~flee,~~ **side** the ~~farber~~ **surface** is hard ~~and, though, she also~~ **and smooth, the ashes** having been ~~to for diffused~~ **so far dissolved** by the ~~mother~~ **moisture** deposited by the ~~finde~~ **smoke** as to cement into one uniform ~~mafs.~~ **mass.** This is ~~fonctions followed~~ **sometimes dissolved** even ~~once~~ **into** a fluid ~~here, its fact~~ **state, in such** a manner as to run down the ~~files~~ **sides** of the ~~ease; is,~~ **cone; so** that after several attempts, he was at ~~lab~~ **last** obliged to abandon his ~~deligen.~~ **design.** Fig. ~~2~~ **2.** exhibits a view of the crater of ~~Eta~~ **Etna** taken ~~No 121,~~ **N° 121.**

ETNETN

ET N [8] E T N on the ~~brick~~ **brink** of the ~~raft ride.~~ **craft fide.** The ~~foreground (or~~ **fore-ground (a** a) of ~~Ften.~~ the figure is one division of the crater. Beyond it are two ~~eminence & and,~~ **eminences b and c,** higher than that on which ~~forms~~ **fome** human figures are ~~represented.~~ **reprefented.** All the three form ~~aims of the~~ **a** triangle nearly ~~conflated,~~ **equilateral;** but, ~~we were~~ **when** viewed from any ~~figure of the confidence difference,~~ **confiderable diftance,** only two of them can be ~~facing forceter,~~ **feen; for** which ~~refon~~ **reafon** the ~~Siciliana~~ **Sicilians** have termed the mountain ~~allowing me double-horred.~~ **bicorne, or double-horned.** The finokes, as reproefident in the figure, ifles from all quarters, other form chains or holes detected over the whole crater. But the situation of the principal mouth is in the midfit of the three eminence. Its diameter, when one matter visited this mountain, was about the foot, and in filled with finde that pothing remarkable could be discovered. From the height of the rocks flattened on the lift rate of the print, and

on which the human targets are respectfully, all the way to the rock z on the right, the distance is no more than good too. Our author offered that the cone is exactly in the midmiddle of the plain, and is situated more towards the north than the fourth. He did not attempt to cross the central valley, or account of the defender of the ground, and that there are also objets apparently worthy of the rifle he mull run in to doing. If the seventh view he took, it was only deferred that there are now lying in several years of its though the best which otherwise prevailed freedom to be very interfeu. The ~~finde~~ **fmoake** which ~~differ~~ **iffues** from the ~~current~~ **crater** of ~~Eta~~ **Etna** is generally carried in a direction from ~~forth~~ **fouth** to ~~northy~~ **north;** and, as it ~~bring~~ **brings** along with it a ~~comfortable~~ **confiderable** quantity of water, the latter, ~~conducted~~ **condensed** by the cold winds, runs down the ~~tide~~ **fide** of the mountain in ~~plentifils means,~~ **plentiful ftreams,** and often leaves pretty permanent marks of its ~~courier.~~ **courfe.** In ~~the mainte~~ **this manner** he accounts for the great eruption of water in 1755, which he ~~fuppoder~~ **fuppofes** to have been ~~oc-water in colored~~ **occasioned** only by an unusual quantity of water falling into ~~1733, asthe burned fears~~ **the burning focus** of the ~~mountains, here needed more for, foam,~~ **mountain, there rarefied into flame,** and afterwards condensed by the coldness of the atmosphere. Like other travellers to mount Etaa, this gentleman South wind found the wind blowing from the fourth ; and he is of generally opinion, that a fortunately allows here now requested on the top than any other, as he did not observe any channels curral drama by the water on any other side than the north. He had reversal operation of making this discussion, having frequently visited the top of Etaa, and always paid attention to the crater. The fault on the cuf and well field was always loads, while that on the north was compelled into a fold body. The three formamists were of a later date than the rest of the crater, having been probably thrown up by bone eruption, which had burt aunner. The black spots on the foreground repetfest a number of hillsides about the rise of mole-hills, from which a fulphumous yearn confronts flyer, and by which the adjacent ground is tinged of an ochery color. This vapor filter from the creatives with a cut of shallow whilling outfer, which with the wokenic thunder, frooks, and noxious fipil, render it very different to the flare ever for a few moments. The findex is reproduced in the figures precisely as it did on the day that he afecided, which was very warm. But it does not always life in this moment, for white the cold always richts, collects into a body, and thickens around the edge of the crater; on which occutions it is condensed into water, which difficile itself around the edge of the crater, and mixing with the alheshegues
