[Margin: Damps.]

thickened the air in the pit, and then it would appear again; they lighted their candles at it ~~sometimes~~ **fometimes** when they went out; and fo in this pit it did no further ~~human?~~ **harm.** In another ~~pits,~~ **pit,** however, it ~~from apparently,~~ **soon appeared,** and at ~~half~~ **last** produced a ~~multi~~ **most** terrible ~~explolions. "This~~ **explosion. This** was ~~ocafioned~~ **occasioned** by ~~none~~ **one** of the workmen going ~~independent~~ **imprudently** down with a lighted candle, after a ~~ceilation~~ **cessation** of work for ~~form~~ **some** days, and the force exerted by it ~~femen~~ **seemed** equal to that of ~~gun-powder.~~ **gunpowder.** The formation of unintractable air in mines cannot be attributed to any variation of atmospheric or there is no natural process with which we are acquanted, by which fish a change could be accomplished. In one influence, however, we have an example of a champ being produced, not only without any confidential flagation of atmospheric air, has where there is the belt circularism recognizable. This is in large bellows ufeid in metallurgie works, which are foretime birth by an explosion of infammake matter processing from the mind matters with which the leather is greeded. Dr Priefley has flown, that inflammable air is comprised of pure elementary fire charcoal or phologines and stable veter; and that this composition may take place even _in_ _wason._ All the materials are to be met with in the bowels of the earth. Coal, a bitumen imbalance, is abundantly able to supply the phogililon; the natural motions of the earth affords water, and the heat, between goods, which constantly calls in the bowels of the earth, may be sufficient to produce a quantity of fullammable air, which gradually occurringfalling in chois places where it is not a constant threat of atmospheric air to carry it off, will foam produce the desirable effects already mentioned. A much more important consideration than the formation of damps, however, is the proper method of avoiding their practical effects. The inflammation lies at one kind develops on eye methods of preventing it from accumulating, viz., by letting fire to it. This may be done with flying under it has been offered to get too far before the very moment is made: I'm the insanhammable air, being much lighter than any other kind will naturally fit to the day so that a man, lying flat on the ground to avoid the force of the explofion, and holding up a lighted candle fixed upon a pole, you at once fee the mine from fetch a troublehome goodt. But where it has been allowed to accumulise in too great quantity, fo that this method causes be ufeid, or in the other kind, which is not inflannable, the method commonly justified is to produce a confluent circulation of air as much as possible through all parts of the mine. To procure this they make a perpendicular opening, which they call _haunk_ or _flaqls_, to that the mine may have two or more openings; and thus by realtion of the difference of emperature between the open atmosphere and that in the mine, there is a constant danger of air through them both. This current will always be fronger in proportion to the difference between the external atmendapre and that of the mine; and likewise in proportion to the difference between the depth of the two thafts. But as the temperature of the atmosphere is variable, it happens, at certain feafons of the year, that there is not a sufficient difference between that of the atmosphere and in the mine to produce the ~~neceffiny~~ **necessary** circulation. This happens principally in the firing and assembly, at which relation ~~if~~ **it is** necessary to ~~fight iron~~ **light fires** in the ~~fluids,~~ **shafts,** which are always efficacious for the purpose ~~defend.~~ **desired.** Among the other afes to which dephloglitated air, might be applied, Mr Cavallo ~~reckona~~ **reckons** that of ~~recurring~~ **recovering** people from the dangerous effects of dams in mines, and some ~~fishermenous~~ **fubterraneous** places. If a large ~~bladder;"~~ **bladder,** fays he, " into which a foliation of lime in ~~vater~~ **water** is introduced, be filled with dephlogilitated air, and ~~in his~~ **a small** wooden or ~~glala pipe. He~~ **glafs pipe be** adapted to its ~~deck,~~ **neck,** a man may hold that pipe in his mouth, and may breathe the ~~ofphiglicated clay,~~ **dephlogilitated air,** and thus ~~equippedel be~~ **equipped he** may enter into the ~~fubtermous~~ **fubterraneous** places, ~~until~~ **amidst** the various ~~shade~~ **clafic** fluids contained in them. A large bladder of ~~dephiglittered~~ **dephlogilitated** air will fever be above a quarter of an hour, which is a length of time follicles for various ~~purposes~~ **purposes;** besides, ~~it~~ **if** longer time ~~it~~ **is** required to be ~~feet~~ **spent** in these places, ~~aperdo~~ **a person** may have two or more ~~bladder~~ **bladders** of ~~dephiglitated~~ **dephlogilitated** air along with him, and may ~~fihlit~~ **shift** as ~~foot~~ **soon** as the air of ~~use~~ **one** is contaminated. Without the ~~receiptify~~ **neceffity** of any more complicated ~~approach,~~ **apparatus,** the ~~diabetes~~ **bladders** full of ~~dephloglicitated~~ **dephlogilitated** air may be kept flopped by putting corks into the ~~gills~~ **glafs** or wooden pipes that are tied to their necks. This ~~is mainly allo to feed the diving balls."~~ **air might also be ufed for diving-bells.**

DAMSEL

DAMSEL, from the French ~~_damself~~ **damself** or ~~demasifons_,~~ **demasifons,** an application ancestri given to all young people of eitherys, that were of endular or genest extraction, as the fons and daughters of princes, knights, and barons: thus we read of Daniel Prisin DaudiL Louis le Gros, David Richard spruce (My Wales. From the ~~folos~~ **fons** of ~~Kings~~ **kings** this appellation ~~ftp piled~~ **first passed** to ~~theife~~ **the fofe** of great ~~locals~~ **lords** and barons, and ~~a~~ **at** length to ~~think~~ **the fofe** of ~~gestionome~~ **gentlemen** who were not yet ~~lengths.~~ **knights.** At ~~present damful~~ **prefent damfel** is applied to all ~~meals~~ **maids** or girls not yet ~~material,~~ **married,** provided ~~by~~ **they** be not of the vulgar.

DANX

~~DANX, er Jo now,~~ **DAN, or Jor-dan,** which shall literally denotes "the river ~~Dan?"~~ **Dan,"** to named from the people where it has its forces, which is also called Plulah, from its round figure, to the north of big apparent ting from the mountain Panman or Pancum, as was discovered by Philip, Tetrarch of Trecontenes, for on throwing light bodies into the Plulah, he found them to emerge at Pancum (Jofaphay) Eron Pancum it runs in a direct course to a lake called _Manandames_ is for as which is called _Yardan the Lafa_s and theme to the lake Cheretherly, of Tiberias, where it comes incrediely the lake Samanthouis and its fringes and is called the _Greater Yardan_ containing its check counts, forthwards, till it falls into the Alkalities. Dax (use grow), a term to the wet of the fource of the ~~Jordan's~~ **Jordan's** formerly called Leair (Jofhan, Judges, Jofaphus). This was the north, as Berichholz was the fourth, bounded of the patient, as appears from the common expection in Scripture, from Dar to Beefheha. At Dan Jeradeam credited one of the golden calers (1 King size). ~~Dax,~~ **DAN,** the tribe, extended itself ~~wellward~~ **westward** of Judah, and was ~~permitted~~ **terminated** by Azotus and Dora on the ~~Mediterminom (Jofaphay).~~ **Mediterranean (Joppekus).**

DANAE

DANAE, in antiquity, a coin ~~famewhat~~ **fomewhat** more than an obolus, ~~died~~ **ufed** to be put into the mouths of the dead, to pay their ~~patige~~ **pafsage** over the river Acheron.

Plate: DANAS
