[Margin: Preparations.]

flower. When in perfection, it is very light and thin; pale, and almost ~~colorules ;~~ **colourlefs;** of great fragrance, ~~the'~~ **tho'** not quite ~~for a belemary idelf.~~ **fo agreeable as the rofemary itfelf.** It is ~~recomended,~~ **recommended,** in the ~~dole~~ **dofe** of a few drops, in nervous and ~~hyfleric~~ **hyfteric** complaints. ~~Borchave~~ **Boerhaave** holds it ~~ing~~ **in** great ~~efeem againit epilepties,~~ **efteem againft epilepies,** and ~~fuppreffions~~ **fupprefiions** of the ~~usetric purgurations, occaulted~~ **uterine purgations, occafioned** by ~~weakens~~ **weaknefs** and ~~indelhvity. —535:~~ **inactivity. 535.** Efential oil of ~~ruse-laaves.—~~ **rue-leaves.** L. L. The oil of rue has a very ~~acid tafes,~~ **acrid tafte,** and a ~~genetrating (well, refreshing the one~~ **penetrating fmeil, resembling that** of the herb, but rather more unpleasant. It is fometimes made ~~uie~~ **ufe** of in ~~hyfferie~~ **hyfteric** diforders, and as an anthelmintic ; as alfo in epilepfics proceeding from a relaxed flate of the nerves. Rue yields its oil very ~~faringly.~~ **fparingly.** The ~~larger~~ **largeft** quantity is obtained from ~~which~~ **it when** the flowers are ready to fall off, and the feeds begin to flow ~~themlveres~~ **themfelves** : fuitable maceration, previous to the ~~distillation,~~ **diftillation,** is here extremely ~~meselitary.~~ **neceffary.** —536: Efential oil of ~~fuerin~~ **fauerin** leaves— L. E. This oil is a celebrated uterine and emmenagogue ; in cold ~~plegnatie~~ **phlegmatic** habits, it is undoubtedly a ~~medi-cine~~ **medicine** of good ~~fender,~~ **service,** though not capable of performing what it has been usually represented to do. The ~~dole~~ **dose** is, two or three drops or more. ~~—537:~~ **537.** Efential oil of ~~fulnfras—~~ **faffafras.** L. E. This is the most ~~pondense~~ **ponderous** of all the known ~~effen-tial~~ **essential** oils, but ~~ribs~~ **rises** in distillation with ~~efficient cafe:~~ **sufficient ease:** it appears limpid as water, has a moderately pungent taste, a very ~~fragment (well),~~ **fragrant smell,** exactly ~~remember~~ **resembling** that of the ~~inflates. If hands~~ **laffafras. It finds** greatly commended **as** a ~~a flourir,~~ **fudorific,** and for purifying the blood and ~~joves:~~ **juices:** it is ~~likewife topped~~ **likewise supposed** to be of ~~review~~ **service** in ~~humoural ashmas~~ **humourous asthmas** and coughs. The ~~dole~~ **dose** is from one ~~chop~~ **drop** to eight or ~~ten ;~~ **ten,** though Geoffroy goes as far as ~~so.~~ **20.** The decoction remaining after the distillation of the oil, ~~afford,~~ **affords,** by ~~infiltration,~~ **infusion,** an useful ~~extract~~ **extract,** of a ~~mold, bitterth, albalkringed~~ **mild, bitterish, fubaftringent** tafte. ~~Hufman~~ **Hoffman** fays, he has given it with great ~~benefits,~~ **benefit,** in ~~doses~~ **dofes** of a ~~teruple,~~ **feruple,** as a corroborant in ~~eachethe~~ **cachectic** cafes, in the decline of ~~interming~~ **intermitting** fevers, and for abating hypochondriacal fpafms. ~~—538:~~ **538.** Oil of ~~turpentine—~~ **turpentine.** L. E. This is distilled in the ~~time~~ **same** manner as the foregoing oils, and is finally an official one, though not ~~ufually~~ **usually** ranked in this ~~elafa:~~ **class:** it is commonly, but improperly, called ~~—fprins~~ **spirit** of ~~turpentine—.~~ **turpentine.** It is employed in large quantities for ~~tone~~ **some** mechanic ~~purpoda~~ **purposes,** and hence the distillation of it is become a particular ~~bufi-neis.~~ **business.** This oil is a ~~sexy~~ **very** hot, stimulating medicine. It is ~~fometines~~ **fometimes** given as a ~~fudorlie~~ **fudorific** and diuretic, in the dole of two or three ~~drops~~ **drops:** in larger ~~doses,~~ **dofes,** it is apt to ~~greetly~~ **greatly** heat the body, ~~coactalion~~ **occasion** pain of the head, an effusion of the ~~fenect~~ **femen** and liquor of the ~~parasite~~ **profitate** glands. It has nevertheless been of late taken in ~~considerable dofer~~ **confiderable dofes** (along with honey or other ~~convict wolhic)~~ **convenient vehicles)** against the ~~delicate ;~~ **feticaca;** and, as is ~~field,~~ **faid,** with good ~~faccets.~~ **fuccefs.** Some have recommended it against ~~vertical ruminants -~~ **venereal runnings:** but here ~~I is~~ **it** has produced ~~mirchievous~~ **mischievous** consequences, ~~influming~~ **inflaming** the parts and ~~ag-gravating~~ **aggravating** the diforder. Externally it is not ~~unfre nestly~~ **unfrefrequently** employed against rheumatic pains, aches, ~~fprains,~~ **sprains,** for ~~dieuffing~~ **diffusing** cold tumours, and restraining ~~hemorsrhages.~~ **hemorrhages.** 539. After the distillation of the turpentine, there ~~remanus~~ **remains** in the ~~fill~~ **still** a brittle ~~refinous folblance,~~ **resinous substance,** of a yellow colour, called ~~—yellow refin [L.]—.~~ **yellow resin [L.].** The only ~~uie~~ **ufe** of this is in external applications, for giving ~~confidence~~ **confiftence** to platters, and the like ~~purposes. —540.~~ **purpofes. 540.** Most of the foregoing oils are drawn by our ~~chemits,~~ **chemists,** and easily procurable in a tolerable degree of ~~perfections i thofe~~ **perfection; those** of cinnamon, cloves, ~~numanges,~~ **nutmegs,** and ~~maces, accepted. There~~ **mace, excepted. These** are usually imported from ~~abroad ;~~ **abroad;** and are for the ~~molt~~ **most** part ~~fo~~ **so** much adulterated, that it is difficult to meet with ~~fuch~~ **such** as are at all fit for ~~life.~~ **use.** Nor are the adulterations of thefe kinds of prepara-tions easily disconoable. The groffer abubic indeed may be readily detected, thus if the oil is mixed with fpirit of wine, it will turn milky on the addition of water ; if with spearful oils, rectificil spirit will differ the eficient, and leave the ober behind; if with oil of turpentine, no dipping a piece of paper in the mixture, and drying it with a gentle heat, the turpenwe will be betrayed by its final). But the more fubble artift have corrected other methods ofophilisation, which elude all trials of this kind. Some have looked upon the specific gravity of oils, as a certain criterion of their ~~genunements.~~ **genuineness.** This, however, is not to be ~~ablotely~~ **absolutely** depended ~~on ;~~ **on;** for the genuine oils, obtained from the ~~fabelj, oftentimes~~ **same subject, often-times** differ in gravity as much as those ~~draws~~ **drawn** from different ones. Cinnamon and cloves, ~~whole~~ **whose** oils ~~ufually link to~~ **usually sink in** water, yield, if ~~flowly~~ **slowly** and vastly ~~difilled, as~~ **distilled, an** oil of great ~~fragency,~~ **fragrancy,** which is nevertheless specifically lighter than the aqueous fluid employed in the distillation of it; ~~whillts,~~ **whilst,** on the other hand, the ~~full rumants~~ **last runnings** of some of the ~~lightest~~ **lighter**

oils prove ~~feme-times to poucious~~ **sometimes so ponderous** as to ~~funk~~ **sink** in water. As all efential oils agree in the general properties of fishability to prints of wine, individuality in waters, mifcibility with water by the intervention of certain intermedies, volatility in the least of boiling water, &c. is la plain that they may be variously mixed with one another, or the denser highlifted with the cheapys, without any polifficiency of discovering the abuse by any trials of this kind. And indeed, it would not be of much advantages to the purchase if he had inflaible criteria of the genunements of every individual oil. It is of as much importance, then they may be _goods_, as that they may be _genuers_; for we have often seen genuine oils, from incautious dililitations, and long and careful keeping, weaker both in fuell and tafte than the common sophisticated ones. The fuell and tafte form to be the only certain tells that the nature of the thing will admit of. If a bark flould have in every refined the appearance of good cinnamon, and flould be proved indispensable to be the genuine bark of the cinnamon trees yet, if it wants the cinnamon flavors, or has it but in low deer, we yriclet it and the cage is the time with the oil. It is only from uie and habit, or comparison with fpecinens of known quality, that we can judge of the goodhefs, either of the droge themfrelves, or of their oils.
