[Margin: Preparations. / brought from Italy, are prepared in this manner. The odorous parts may be again separated from the oil, and transferred into water or fpirit, by distillation with those liquors.]

Sect: IV. _Conferration of recent Vegetables ~~and_ _their~~ **and their** Infusions, ~~etc.~~ **&c.** by Sugar and Honey._ § 1. CONSERVES. 454. CONSERVES are ~~compollions~~ **compofitions** of recent vege table matters and fugar beaten together into an ~~uniform~~ **uni form** mafs. This management was introduced for preferving certain samples, undried, in an agreeable form, with as little attention to poblin in their native viruses; and to fome subjects it is very advantageously applied. Vegetables, whole virus use all or delivered in drying, except in this form be kept unjusted for a length of time; For, by carefully focusing the mouth of the containing wells, the alteration, as well as diffusion, of their either principles, is generally prevented, and the fugar preserves them from the corruption which joley vegetable would otherwise undergo. There are, however, fundry vegetables whole ~~vitous~~ **vitious** are impaired by this treatment. Muchaginous fubilances, by long lying with fugar, become leis glutionus, and that antly fully follow them the palate. Many of the fingers flowers are of to tender and delicate a texture, as almost entirely to lode their peculiar qualities on being been on brushed in general. It is obvious, that in this form, on account of the large admixture of fugar, only fulbliances of considerable activity can be taken to advantage as medicines. And indeed, conferve are at perfect ~~confidered~~ **considered** chiefly as auxiliaries to medicines of greater efficacy, as interventions for joining them together. They are very convenient for echoing into boubles or pills the more pondrous powders, as mecurunu dulcies, the colors of iron, and other mineral preparations; which will liquid or leis confident matters, as fyrroup, will not cohere. The flops were formerly ~~ecumulated~~ **encumbered** with many conferences altogether insignificant; the few now retained have in general either an agreeable flavour to recommend them, or are capable of answering some ~~ofeful~~ **useful** purpose as medicine. Their common dole is the bulk of a ~~nutmey,~~ **nutmeg,** or as much as can be taken up at once or twice upon the point of a knife. There is in general no great danger of exceeding in this particular. 455. _~~General~~ **General** method of preferring ~~conferences_.~~ **conferences.** Leaves are picked from the ~~flalks,~~ **falks,** and flowers from their ~~crops.~~ **cups.** They are beaten in a marble mortar, with a wooden ~~peille,~~ **peftle,** into a ~~smooth mafs~~ **fmooth mafs;** after which ~~three there~~ **thrice their** weight of double-refined fugar is added by degrees, and the beating continued till they are uniformly mixed. The fugar should be ~~pulverified~~ **pulverized** by ~~infilt,~~ **itself,** and ~~patfed~~ **passed** through a ~~fleeve,~~ **sieve,** before it is mixed with the vegetable mafs; otherwise it cannot easily be reduced to ~~folfixeleine friends, fo~~ **sufficient fineness, so** as to be ~~daily~~ **duly** incorporated. Some vegetables are ~~cause~~ **scarce** reducible to the requisite ~~finerals~~ **fineness** by beating in a mortar; ~~fuch~~ **such** is orange-peel. This is ~~molt~~ **most** conveniently ~~raffed~~ **rasped** or grated off from the ~~finis,~~ **fruit,** then well mixed with the fugar, and the compound fet by in a clole veffel for fome weeks; after which it may be beaten Smooth with confidierably leis labour than at frift. This peel, and red role-buds, are commonly ground in a wooden mill made for that purpole. 456. _~~Conferve~~ **Conferve** of the leaves of garden ~~fuancy-grafs_.~~ **fourvy-grafs.** L. This is the only form that feury-grafs in futultance can be kept in without the total line of its virtues. The conferve retains the full suite and virtue of the herb for a very conferable length of time, as a year two, provided the veffel be made perfectly cleo and ice in a cool place. It must be given in Ecurbotic habits three or four times a-day, so efficient. 437. _~~Conferve~~ **Conferve** of the leaves of ~~wood-forrel_.~~ **wood-forrel.** L. This is a very elegant and grateful ~~conferve y~~ **conferve;** in talte it is lightly ~~cushion,~~ **acidulous,** with a peculiar ~~flavory~~ **flavour,** which ~~home refranchise totals~~ **fome refemble to that** of ~~green-taa.~~ **green-tea.** It is taken ~~becauſe~~ **occasionally** for quenching ~~thirk,~~ **thirft,** and cooling the mouth and fauces, in hot distempers. It may be ~~uifefully~~ **ufefully** joined to the foregoing preparation, whole ~~victure to fomelan~~ **virtue it fomewhat** promotes, at the same time that it improves the ~~taille.~~ **talte.** 458. _~~Conferve~~ **Conferve** of the leaves of ~~jewarmist_.~~ **fpearmint.** The conferve of ~~mini~~ **mint** retains the ~~safe~~ **taste** and virtues of the herb. It is given in ~~weakouts~~ **weaknesses** of the stomach and ~~perhaps~~ **retchings** to ~~omit;~~ **vomit;** and not unfrequently ~~deea fervice~~ **does service** in ~~fome cafes~~ **some cases** of this kind, where the warmer and more active preparations of ~~mini~~ **mint** would be ~~leis~~ **less** proper. 459. _~~Conferve~~ **Conferve** of the leaves of ~~rugs_.~~ **rue.** L. This conferve is given from a dram to half an ounce in crudities of the prime via, for promoting digestion, and in by their disorders; I gently illuminate the ~~folids,~~ **fo-lids,** attenuates vital juices, and excites the natural feecretions. Some have had a great opinion of it, ~~taken~~ **ta-ken** in a morning, as a preferative against the effects of contagious air or calitation. 460. _~~Conferve~~ **Conference** of the tops of ~~jau-mesorwood_.~~ **sea-wormwood.** L. The conferve of wormwood has been celebrated in droplets. Mathihulus relates, that several persons were cured by it of that diltemper, without the diffiance of any other medicine. Where the diforder indeed proceeds from a simple laxity or flagidity of the folids, the contained use of this medicine may be of bone ferives, as it appears to be a not malignant mild ~~corrobranant.~~ **corroborant.** It is directed to be given in the dole of half an ounce, about three hours before meals. 461. _~~Conferve~~ **Conferve** of the buds of red ~~refer_.~~ **rofes.** This is a very ~~apparent~~ **agreeable** and useful ~~conere.~~ **conferve.** A dram or two, diluted in warm milk, are frequently given as a light refrigerant in weakness of the ~~blomonth,~~ **stomach,** and likewise in ~~couple~~ **coughs** and ~~phithical~~

phthisical complaints. In the German Ephemerides, examples are related of very dangerous ~~phihifies~~ **phthises** cured by the ~~continned out~~ **continued use** of this ~~medicine;~~ **medicine:** in one of ~~the cafes, zo~~ **these cases, 20** pounds of the conferve were taken in the ~~face~~ **space** of a month; and in another, upwards of ~~go.~~ **30.** Riverius mentions ~~federal~~ **several** other ~~influences~~ **instances** of this kind. 461. ~~—Conferve~~ **Conferve** of ~~refractory-flowers—.~~ **refractory-flowers.** L. ~~Rofernary-flowers~~ **Rofemary-flowers** in great ~~incature loft~~ **meafure lofe** their peculiar
