LY R [4329] L Y R Lyre, which he ufd to frequent, at the foot of a mountain in ~~Arcadill.~~ **Arcadia.** In all as he was going in, he found a ~~tortulofe finding~~ **tortoise feeding** at the entrance of his ~~case:~~ **cave:** he killed ~~him~~ **the** poor creature, ~~and~~ **and,** perhaps, ~~vat~~ **eat** the flesh of it. As he was diverting himself with the ~~flesh,~~ **shell,** he was ~~migliedly pleafed~~ **mightily pleased** with the ~~molle of great~~ **noise it gave** from ~~his~~ **its** concave figure. He had ~~puffily~~ **possibly** been cunning enough to find ~~one,~~ **out,** that a thong pulled ~~fruit~~ **tight** and ~~affected is~~ **faltened at** each end, when ~~freds~~ **struck** by ~~things you take aird mudiculous. How ever~~ **the finger, made a fort of musical found. However** that was, he went immediately to work, and ~~cut feveral~~ **cut several** things out of the ~~links~~ **hides** he had lately ~~flolen,~~ **flayed,** and ~~afected~~ **faltened** them as ~~right~~ **tight** as ~~we~~ **he** could ~~on~~ **to** the ~~field~~ **shell** of ~~the tortofie~~ **this tortoise;** and, in playing with them, made a new kind of ~~mute~~ **music** with them to divert himself in his retreat. This, considered only as an account of the first invention of the lyre, is not altogether ~~for unsurals?~~ **unnatural.** The most ancient representations of this instrument ~~ages~~ **agree** very well with the account of its ~~uncertain~~ **invention:** the lyre, in particular on the old ~~echelith~~ **celestial** globes, was ~~reprefered~~ **represented** as made of one entire shell of a ~~tortorise;~~ **tortoise;** and ~~that, Amphibus~~ **that Amphion** in the celebrated group of the ~~Diver,~~ **Dice,** or Toro, in the ~~Fanerle place~~ **Farnese palace** at Rome, which is of Greek ~~feulpture,~~ **sculpture,** and very high ~~authority,~~ **antiquity,** is figured in the ~~fine~~ **same** manner. See Plate ~~EXXL~~ **CLXI.** fig. ~~7.~~ **9.** There have, however, been many other claimants to the fewven-firinged lyre. For though Mercury invented the thin instruments in the manner already related, it's fail for afterwards gave it to a position, who are the first that played upon it with method, and made it the confiant companion of pretty. According to Moment ac scount of this transfections, in his hymn to Aftervery, it was given by that god to Apollo, as a peace offering and indemnification for the oxen which he had flolen from him: ~~Tv Phachos Mais's fun preints~~ **To Phoebus Maia's fon presents** the lyre, A ~~A just~~ **gift** intended to ~~aproils like it.~~ **appeafe his ire.** A ~~post contains~~ **gift intended to appease his ire. The god receives** it ~~aproils,~~ **gladly,** and ~~clays.~~ **displays** The ~~need information~~ **novel instrument** a ~~threshold was).~~ **thousand ways:** With ~~exact least full~~ **dexterous skill** the ~~platform readily,~~ **plectrum wields;** and ~~fines. Most seen according~~ **f With voice accordant** to the ~~resulting fringes. Methods~~ **trembling strings, Such strains** as ~~such that as good~~ **gods** and ~~most properly,~~ **men approved,** from ~~whence I the tweet milhens frung~~ **w The sweet alliance sprung** of found and ~~fent. Doulton~~ **fence. Diodorus** informs us, that Apollo ~~four reporting~~ **soon repenting** of the ~~ereety~~ **cruelty** with which he had treated ~~Marxas~~ **Marsyas** in ~~confidence~~ **consequence** of their ~~unified control,~~ **musical contest,** broke the ~~fringe~~ **fringes** of the lyre, and by that means put a flop for a time to any further progress in the practice of that new ~~in frumers.~~ **instrument.** "The ~~music (aida by~~ **muses (adds he)** afterwards added to this ~~infrument~~ **instrument** the ~~firing~~ **string** called ~~my/y Linas,~~ **mefe; Linus,** that of ~~_Ikshary_)~~ **lichaeus;** and Orpheus ~~Thanayas, hide finds~~ **and Thamyras, those fringes** which are ~~caused _Update~~ **named hypate** and ~~participate_ (i).~~ **parhypate (a).**" Again, many ancient and ~~repeticable~~ **refpeetable** authors tell us, that, before the time of ~~Terpandan,~~ **Terpander,** the Grecian lyre had only four ~~fingers and;~~ **strings; and,** if ~~so~~ **we** may believe ~~Biduan, is~~ **Suidas, it** remained in ~~alien facc 850~~ **this state 856** years, from the time of ~~Amphio,~~ **Amphion,** till Terpander added to it three new ~~fringes,~~ **strings,** which extended the ~~mulleical feel~~ **musical scale** to a ~~hope, chord,~~ **heptachord,** or ~~events,~~ **seventh,** and ~~luppiled~~ **supplied** the player with two ~~conjoint tetracothis.~~ **conjunct tetrachords.** It was about 150 years after this period, that ~~Pythogorsa~~ **Pythagoras** is ~~fast~~ **said** to have added an eighth ~~fringe~~ **string** to the lyre, in order to complete the ~~ocrave,~~ **octave,** which ~~conflicted~~ **consisted** of two ~~disjunctiont herchords.~~ **disjunct tetrachords.** Bochthia gives a different history of the feels, and tells me, that the flyton did no long remains in fact narrow limits as a ~~tetrachold.~~ **tetrachord.** Chorobus, the fan of Athis, or Arys, king of Lydia, added a fifth firing; Hyguns, a firstly, Terpandera, a favorite and, at large), Erythema of Samoa, an eighth. But all their accounts are irreconcileable with Momars, hymn to Mercury, where the chelys, or reduce, the invention of which he earlier or than god, is fast to have had been fittings. There are many clamans among the musicians of ancient Greece, to the things that were afterwards added to thefly, by which the date, in the time of Alfoxcoras, was extended to two offices. Athamus, more than once, peaks of the nine fingerling inflamments, and Lon OlChoja rtagies and lyrics pace and philosopher, who fitf recited his pieces in the 8zd olympiad, 452 B. C. mentions, in some refer quoted in Dr. David, the tenfirginged lyrs, a prodt that, the third conjoint tetrchord was added to the scale in his time, which was about 50 years after Pythagoras is fuppelled to have confinational the death. The different claimants among the Grecks to the famedual differences, only proxy, that made was cultreated in different countries, and thus the inhabitants of each country invented and improved their own in-fruments, none of which happening to celebrate those of other parts of Greece, resident it difficult for hisflorions to avoid attributing the fame invention to different periods. Thus the Eagle Rule we give to Minerva, and to Marfayas theynas, or filialty, to Pan, and to Cybele, and the lyre, or citura, to Mercury, Apollo, Amphioa, Lima and Opheus. Indeed, the mere addition of a living or now to an infiltration with on a neck, was fo obvious and early, that it is scarce podible not to conceive many people to have done it at the fame time. With ~~respect~~ **refpe&** to the form of the ancient lyre; as little agreement is to be found among

authors as about the number of ~~things.~~ **ftrings.** The ~~belt endurance~~ **beft evidences** concerning it are the representations of ~~this inflamment~~ **that inft rument** in the hands of ancient ~~flatues,~~ **ftatues,** bas-reliefs, ~~etc.~~ **&c.** See Plate CLXI. (a) It has been already related, that the lyre invented by the Egyptian Mercury had but three ~~Rings;~~ **ftrings;** and by putting ~~their~~ **thefe** two circumstances together, Dr Burney ~~oblivers,~~ **obferves,** we may perhaps acquire ~~force~~ **fome** knowledge of the ~~progresti~~ **progrefs** of ~~mufe, ory,~~ **mufic, or,** at ~~leath,~~ **leaft,** of the ~~exterion~~ **extent** of its ~~facile,~~ **fcale,** in the ~~highest~~ **higheft** antiquity. Mife, in the Greek islands, it is fourth bound that the female tetrachord of the great tyhem, and left terrachon invented by the acoustic, anoring to our A, on the fifth line in the bife. If this found then was added to the dance three, if proven to important points, frib, that the much ancient tetrachord was that from E in the bile to A, , and that the three original things in the Mexican and Apolonian lyre were tuned by F, G, which the Greek Life***** male Mon, Parteypate Mefon, Mafin Diatoms. The addition therefore of Meje to thefe, completed the Brit and mid eastern tetrachons. Yet, G, A. The firing ~~—Ikshorn—~~ **lichanos,** then, being added to thefe, and ~~anwfering~~ **anfwering** to our ~~Do~~ **D** on the third line in the bafe, extended the ~~complex~~ **compafs** downwards, and ~~give~~ **gave** the ancient lyre a regular feries of five founds in the Dorian mode, the ~~mother~~ **moft ancient** of all the Greek ~~mokes~~ **modes;** and the ~~top fringes~~ **two frings** called ~~—Popular~~ **Hypate** and ~~Parteypar—, compelling andlii~~ **Parhypate, correfponding with** our B and C in the bafe, completed the ~~heptachody,~~ **heptachord,** or ~~even~~ **feven** founds, B, ~~G,~~ **C,** D, E, F, G, A, a ~~compuls~~ **compafs** that received no addition till after the time of ~~Findar,~~ **Pindar,** who calls the ~~infrument~~ **inftrument** then in ~~die~~ **ufe** the ~~—feven-tongued lyre.—~~ **feven-tongued lyre.**
