~~Lightning,~~ **Lightning.** we have ~~few always;~~ **feen above;** it is ~~_mattematically couldn't_,~~ **mathematically evident,** that, when a ~~_returning firele_~~ **returning froke** comes to be produced by the ~~_fuddro_~~ **fudden** removal of the very ~~frong clafic~~ **ftrong elastic** electrical ~~prefi fore~~ **preffure** of the electrical ~~atmosphere~~ **atmofhphere** of a thunder-cloud powerfully charged; the ~~frength~~ **ftrength** of ~~such~~ **fuch** a ~~retraining _fireks_ mult~~ **returning froke mutt** be enormous. ~~"~~ If indeed the quantity of electric ~~field~~ **fluid** naturally contained in the body of a man, ~~forrindance,~~ **for instance,** were ~~often mefe,~~ **immense,** or ~~induding,~~ **indefinite,** the author's ~~ultimate~~ **estimate** between the effects producible by a cloud, and those ~~caned~~ **caused** by a prime conductor might be admitted. But ~~fairly electronic~~ **surely an electrified** cloud,—how great ~~forces~~ **force** may be its extent, and the height of its charge, when compared with the ~~scenes~~ **extent** and ~~change~~ **charge** of a prime ~~conductor- cannot cepel~~ **conductor—cannot expel** from a ~~mared (way (only~~ **man's body (or any** other ~~key))~~ **body)** more than the natural quantity of electricity which it contains. On the ~~fodder~~ **sudden** removal, ~~therefore~~ **therefore,** of the ~~preffure~~ **preffure** by which this natural quantity had been expelled, in consequence of the ~~equation~~ **explosion** of the cloud into the ~~earth) so~~ **earth, no** more (at the utmost) than his ~~_robole~~ **whole** natural ~~lack_~~ **stock** of electricity can re-enter the body (c). But we have no reason to ~~fopate~~ **suppose** that this quantity is ~~fo~~ **so** great, as that its ~~fudden~~ **sudden** re-entrance into his body ~~found delivery on~~ **should destroy or** even ~~injury third "~~ **injure him.** At the experiment above ~~deferbed,~~ **described,** the ~~infulated~~ **insulated** perfor receives into his body, at the ~~infant~~ **instant** of the ~~_returning firele_ has~~ **returning fire, not** only all that portion of his own natural ~~electric-free~~ **electric-fire** which had been expelled from it; but likewise transmits through it, at the ~~fame infant, _its consequences~~ **same instant, in consequence** of ~~the~~ **his** peculiar ~~fluctuation_,~~ **situation,** all the electric fire of which the large ~~cloud could~~ **second conductor** had been ~~robbeds~~ **robbed,** and which ~~mult needeffally re-pafa~~ **must necessarily re-pass** through his body, to arrive at that conductor. To render the ~~cafe foreshable instability~~ **case foreshadowed** in natural electricity, the man's body ~~mult~~ **must** be ~~fo~~ **so** peculiarly ~~circumdanced, impunding~~ **circumstanced, supposing** him to be in a ~~hoofu,~~ **house,** that the electric matter which has been expelled from the ~~head~~ **house** into the earth, by the ~~preffure~~ **pressure** of an extensive ~~thundercloud,~~ **thunder-cloud,** could not return back into the building, on the ~~explorations~~ **explosion** of the ~~clouds as different,~~ **cloud at a distance,** without ~~paling~~ **passing** through his body: a ~~safe~~ **case** not likely to happen, ~~unfuls~~ **unless** the ~~boots~~ **house** were ~~infolated~~ **insulated** (like the second conductor in the preceding ~~experiments),~~ **experiment),** and his body became the ~~claimed~~ **channel** through which ~~where~~ **alone** the ~~hole~~ **house** could have ~~the~~ **its** electric matter ~~reflored~~ **restored** to ~~it :~~ **it:** it appears much more probable that the electric matter returns to the house through the ~~_fame elements_~~ **same channels** by ~~whole~~ **which** it before ~~recently pafled~~ **infinitely passed** out, and with equal silence, too more ~~fuddently. "~~ **suddenly.** If the cafe of a man who is abroad, and in an open field, during the time of an explosion —a he is unconnected with other matter of matter above him, no more than the preflic quantity of electric fire, which had been before expelled from his body, will definitely return into it at the infant of a dither explosion; and that this quantity is not uufaly very large, may be inferred from many considerations. ~~"~~ When a ~~perfon~~ **person** standing on the ground holds a ~~Lightning~~ pair of Mr Canton's balls in his hand, while a highly charged thunder-cloud is ~~fufpended~~ **suspended** over his head; the angle made by the ~~balla~~ **balls** indicates the ~~_electrical fate_~~ **electrical state** of ~~this portion~~ **that person,** or the quantity of natural electricity of which his body ~~as~~ **is** at ~~the~~ **that** time deprived, by the action of the ~~(_politively_)~~ **(positively)** charged cloud hanging over him. But we have never ~~feen~~ **seen** the ~~repollion~~ **repulsion** of the balls to fulfillment, as to contain any the apprehensions that the return of his natural electric matter, however ~~fudden,~~ **sudden,** could be ~~attached~~ **attended** with ~~his~~ injury to ~~him a~~ **him;** nor would **he** be ~~be flexible~~ **sensible** of any ~~common use~~ **commotion on** the ~~bulk fuddily~~ **balls suddenly** coming together; ~~the 'a fpark~~ **tho' a spark** might ~~un-doubtedly~~ **undoubtedly** be perceived, at that ~~infants,~~ **instant,** were he ~~infuried,~~ **insulated,** and placed in the ~~four~~ **same** manner with the author when he tried the above-related experiment. ~~"~~ The author nevertheless ~~observe,~~ **observes,** that ~~,~~ there have been ~~influences~~ **instances** of ~~protons~~ **persons** who have been killed by natural electricity, having been found with their ~~_floos torna_,~~ **shoes torn,** and with their feet damaged by the electrical ~~line,~~ **fire;** but who have not ~~bad,~~ **had,** over their whole ~~boo,~~ **body,** any other apparent marks of having been ~~ftuck~~ **struck** with ~~lightning."~~ **lightning.** He adds, ~~"~~ if a man walking out of doors were to be killed by a returning ~~firele,~~ **stroke,** the electrical ~~line~~ **fire** would ~~rub~~ **rush** into that ~~each~~ **man's** body ~~into~~ **through** his ~~_feets_,~~ **feet,** and his feet ~~only ;~~ **only;** which would not be the ~~cafe, here~~ **case, were** he to be killed by any ~~_main fireke_~~ **main stroke** of ~~exploding,~~ **explosion,** either positive **or** negative. ~~"~~ It would be no difficult talk, we think, to account for these appearances in different manner, were all the circumstances attending the cage minutely after-tained, but without interrogating the dead on this futjels, we may more falsifiedly appeal to the ex-perience of the living (a), to flew, that though the _returning fireks_ mult take place, in all thunderforms, _in June degree or other_; yet it is now of that alarming magnitude within the author afterhes to it. If, a non particular thunder-form, a man in the open fields could be killed, at the infant of a dillank explo-

tion, merely by the returners of his new electric fire, which had before been driven out of his body; lureely numerous obferations of persons who had experienced the _returning firele_, in fighting degrees, would be families, and favors a great teacher-theme must have occurred, in which one perform or another mult not, at theinflated an explosion, have felt the effects of the _returning firele_, in _foon degree or other_ from that of a violent sanctions, to that of a flight and almost impregnible pollution. But no observances we this kind are known to us say how we ever heard of any person's experiencing any kind of electrical commotion in a thunder-loria, except fish as have either been directly frocks, or have happened to be in the _royar near neighborhood_ of the foot where the explodes took place. ~~"~~ The author has been aware of this ~~objections,~~ **objection,** which (c) " We ~~fuppie~~ **fuppofe** the ~~perfor~~ **perfan** not to be fo ~~fluuted,~~ **fituated,** that the returning fire of other bodies ~~mult neccfarily pafa~~ **mutt neceffarily pafs** through his ~~body.~~ **body."** (b) " The author does indeed produce a living evidence, in the cafe of a person at Vienna, who, he has been credibly informed, received an electrical shock, by having held one hand accidentally in contact with an intercepted metallic coaching mind, at the infant that a thunder-cloud exploited at the influence, as was considered, or above half an English milk. He likewise observes, that a very strong, bright, and fulden firek (ce fpars) of electric fire has been been, by levels electrificants, to pais in the internal, or interruption, purposefully left in the concluding rod of a book at the infant do a distant explosions, and 'when it was fully proved, by the sharp point of the conductor not being melted, or even tuged,' that the conductor itself had not been effect — "Other observations, however, do not by any means prove the magnitude or danger, of the returning broke, but merely its _esiflessen_ which we do not contiti."
