Historical source: BLEACHING

continued: BLEACHING

Vegetable time, and ~~repasted~~ **repeated** proofs of the good quality of the fluid. At the end of eight ~~more difficult~~ **hours distillation,** I drew 250. ~~"The~~ **The** fire ~~muff~~ **must** be taken from beneath the retort as soon as the ~~definition a fabulist,~~ **distillation is finished,** not only to prevent the effect of the ~~gefone vapour,~~ **gaseous vapours,** which ~~fill~~ **will** continue ~~flowly~~ **slowly** to escape, from ~~selling~~ **settling** on the sides of the tub, but likewise ~~disfigned~~ **to difpose** the ~~restore~~ **retorts** or bodies **to** receive a quantity of warm water, which is to be ~~pound~~ **poured** in up ~~or~~ **to** the neck. There is no need to form an excess of ~~quantity~~ **quantity,** and the hotter the ~~veffles~~ **vessels** are ~~an~~ **the** better. It is ~~effential,~~ **essential,** however, that it be not poured in cold, for fear of breaking ~~while.~~ **the glass.** The adapter is then to be ~~knitted~~ **unfastened** from the neck of the ~~under~~ **leaden** tube, ~~If it is repeated photos's~~ **if the operator chooses;** and in order that ~~to~~ **no** vapour may escape into the workshop, a ~~kick~~ **bit** of ~~hate~~ **lute** or a ~~cook~~ **cork** may be applied to the ~~bank~~ **beak** of the adopter. The ~~find~~ hand easily permits the ~~resort~~ **retort** to ~~our ruled~~ **be raised** and returned again to its place as well as the application of the ~~lins~~ **lute** or ~~Dopper~~ **flopper** to the neck of the adopter, this ~~lift~~ **last** being ~~ruled~~ **raised** with one hand while the ~~coat~~ **cork** is put in with the other. ~~"Nevertheless,~~ **Nevertheless,** as the lists which connect the adopter with the rester of downward different towards the end of the operation, it would be more proident to leave every thing in its place, for fear of damaging thief hates. This danger is greater when the adopters is of lead, because the great length of this additional piece tends to force the hitting full now on the account. If it be required to proceed immediately to a new dif utilities, the reason or basis with a capable e pan mult be immediately taken from the furnace, and unthe fluidbulated in its place ready prepared during the former distillation. This specifically requires a double fet of veffels. 211. When the chilling ~~veffil~~ **veffel** I told, a nearly fo, the whole of its content muff be shaken, by haluding this veffel by the neck with one hand, and apply ing the other to its bottom. The Dopper muff then be taken out, and the veffel greatly affected, taking the refuders to facilitate to charge. In the left mantion the event it to be held by the neck with one hand, and its fate gently setting against the other. The veff fits into which the water and refundal matter of the restors the poured, found rather for of however, pottery, or both than if wood, that feels left bit of veffle fish, which can feel fullyed to dry in the past above the fluid. If this circumstance be not attended to, there will be danger of doing great years due to contents. ~~"It~~ **It** is much convenient to ~~disregage~~ **disengage** the ~~rettors~~ **retorts** or bodies ~~that~~ **while** they are ~~full~~ **still** warm, which continues to be the ~~odds~~ **case** the next morning after distillation, in ~~conference~~ **consequence** of the heat of the ~~fluid~~ **sand** bath. If they be left to cool entirely, the ~~filphate~~ **sulphate** of ~~folda~~ **soda** will crystallize, and it will be necessary to ~~dilutive~~ **dissolve** in hot water ~~fish~~ **such** larger portions as cannot pas through the neck. But Vegetable this inconvenience is not likely to happen, united the ^{thickness}. of one-fourth of the contents of the veffly a bound fourth two hours afterwards; a third fourth after ten hours and a half of eleven hours; and the reffi after twelve hours affiliation, who formed the conditions. quality matter had added by too final, just the six dides have been left undilluted for several days. The fame operation is applicable to that kind of breathtion which is formed by the monitor, it not properly pulseier), dried, or mixes; this cannot be separated from the bottom of the extent, like by means of lost water poured at different facective times. It is likewite details to leave on craft or depletion of murals, no other matter, in the veffle which are recorded, unleft the fans be moveable, in which cafe the rifk is left. But if the average of building should then reviser that the fans veffle be uful without entirely clearing them, it will be exceedingly to range this exclend matter on one side, where it will be led exposed to the heat, and will afford a greater degree of facility for the nitric acid and it upon in. When the liquor is entirely worn off from the veffel, it must not be immediately filled with water, or at least to the height of five or its inches above the return of the leader tube, otherwise the gas, which continues to escape from the difficulty veffle then affords no refinance, might attack the pneumatic veffel inficit. In order that the vapour which exales from the diltilling veffils may not prove inconvenient, it is seccillary to poor in a small quantity of alkaline trivium in the first place, which ultimately defroys the finals. This may be done immediately after the end of the difficulties, and the weak alkaline nutrition therapy the place of the water used for diluting the refuders. But the failure of pouring this little water s, along effecrécence takes place (for which reduce it in poper to your it in by several facective portions, waiting still have some cash time." 252. The oxygenated ~~lawprepare~~ **liquor prepared** in this way is ~~Dr. Charmen~~ very ~~affection~~ **effectual** in ~~blending~~ **bleaching** the ~~fluff~~ **fluffs** which are ~~ime meried in),~~ **immersed in it,** but it ~~is~~ **at** the ~~flame that perfiles~~ **same time poffefles** an ~~colour foilingeasting so~~ **odour fo fuffocating as** to render its ~~die pipelines~~ **ufe unpleasant** and even ~~various~~ **injurious to** the ~~Northern~~ **workmen** employed in the ~~project, should~~ **procels, fhould** any of it ecape. ~~"I~~ **I** have ~~witened, (days reflickly)~~ **witneffed, (fays O'Reilly)** in an extensive ~~monodology over~~ **manufactory near** Paris, the ~~crraft findings~~ **cruel fuffenings** experienced by the ~~wetted wounders,~~ **wretched workmen** from ~~their fascinating reports;~~ **thefe fuffocating vapours;** I have ~~denem~~ **feen them** rolling on the ground in the ~~speech~~ **excess** of ~~going. Precutly~~ **agony. Frequently** even ~~fewer clonders~~ **fever diforders** are the ~~consequence~~ **confequence** of the ~~fruit~~ **firft** effects produced by the oxygenated ~~injury." She p.Rolly burner~~ **liquor. Dr. Charmen** gives a long account of the ~~fifattings~~ **fiftings** which ~~Egia~~ he un-

derwent in his ~~course~~ **courfe** of experiments with this acid. It produces ~~frytomor compelled those~~ **fymptoms completely refembling thofe** of a violent cold, but which go off in a day or ~~now~~ **two** after having ~~definite~~ **defided** from ~~relief~~ **the ufe** of the liquor. This inconvenience ~~was~~ **may** be avoided in two ~~ways;~~ **ways** 37. By rendering the veffels for immersion ~~lo~~ **fo** tight as to prevent the possibility of the cleaps of the gas. 49. By dividing in the water ~~dome fadition~~ **fome fubftance** which has the property ~~to fit penetrating~~ **of fo far neutralizing** the acid **as** to ~~the control~~ **connect** its ~~colour~~ **odour** without ~~defraying~~ **destroying** its bleaching quality to any ~~considerable degrees.~~ **confiderable degree.** 57. Mr Marup of Manchester contributed a ~~tu~~ **tub** for attention, which ultimately adapted to ~~niver~~ **answer** the ~~frift purple.~~ **first purpose.** Its ~~contribution~~ **construction** is simple, and not ~~expetience. "It~~ **expensive. It** would, therefore, be desirable to have an apparatus for the ~~de la~~ **use of** the pure oxygenated ~~muratric~~ **muriatic** acid ~~imply different~~ **simply diffused** in water, which is at ~~some chopped~~ **once the cheapest** and ~~bell~~ **best** vehicle for it. This apparatus must ~~the limp~~ **be simple** in its ~~condition,~~ **construction,** and ~~distribute an automatic exposure;~~ **obtainable at a moderate expense;** it ~~muff~~ **must** confine the liquor in such a manner as to prevent the ~~cleaps~~ **escape** of the oxygenated ~~muratric~~ **muriatic** acid gas, which is not only a ~~loft~~ **loss** of power, but ~~alo~~ **also** an ~~inconvenmence~~ **inconvenience.**
