[Margin: Chup. II.]

The second fort is of those which human industry can multiply in proportion to the demand. Where the commodity, a room, is flash as cannot be produced but by human industry, the price is more under than in almost any other cafe. The increasing fearty and confrequency value of land, trends indeed to make it; but this is countertled by its invention of machinery, and improved methods of labour. The opposite agency of these two causes for a soullant tendency to produce uniformity of the value of grain, though we cannot, with Smith, condlier this uniformity as likely to be fo complete, as to consider the price of grain a fure standard for the price of diver. There are other commodities, however, which nature ~~products~~ **produces** in abundance, or which, where land is ~~plant-ful,~~ **plentiful,** can be multiplied with little or no cultivation. Of ~~thefe~~ **these** the principal is ~~butche meet.~~ **butcher meat.** Lands can be ~~co-vered~~ **covered** with cattle or ~~they~~ **sheep** by the labour of ~~the lands~~ **few hands,** and sometimes without any ~~labor~~ **labour** at all. Hence, in ~~trade~~ **rude** times, ~~butche meet~~ **butcher meat** is always cheaper than ~~one. Imimproved~~ **corn; in improved** periods the reverse is ~~thateafe.~~ **the case.** For a long time the price continues ~~confiantly~~ **confidently** to ~~rife,~~ **rise,** as we have ~~been~~ **seen** it do throughout Great Britain, the ~~autumn area~~ **pasture lands** being ~~alone~~ **more** and ~~make concerted~~ **more converted** into ~~arabile.~~ **arable.** At ~~left,~~ **last,** however, it becomes ~~fo~~ **so** high as to make it an object for the farmer to ~~think~~ **fall his** cattle, and to cultivate ~~greater~~ **ground** for the purpose of feeding them. After this era, the price is likely to experience a certain diminution, from the ~~imported~~ **improved** modes of feeding and rearing, ~~which~~ **which,** in ~~confidence~~ **consequence** of ~~the~~ **this** new ~~situation, as~~ **attention, are** likely to be ~~dif-covered~~ **discovered** and adopted. There are certain animals, as ~~boys,~~ **hogs,** poultry, ~~Sec,~~ **&c.** which are fed on ~~more offs,~~ **mere offals,** and in a ~~trade~~ **rude** state, therefore, are ~~fill~~ **full** cheaper than butcher ~~meet.~~ **meat.** In an improved ~~that~~ **state** they are ~~doctors:~~ **dearer;** for ~~hery here~~ **they have** not as ~~yet~~ **yet,** at least in ~~his~~ **this** country, become an object of separate ~~cultivation.?~~ **cultivation.** The third fort conflicts of thode, in the multiplication of which the power of man is either limited or uncertain. In their the rule is various. Some commodities are not cultivated on their own account, but are appear dages to others; as wool and hides to the carre of the ox or fleece. Both their commodities are much more portable, and more easily preserved, than the field in the animals from which they are taken; the market for them is thus much more creative, and the demands more equal at all lines. Hence, in such periods, when the flesh of animals, from its abundance, is of finally vache, their appendages equal to force if it in prices. At Baena Ayrter Consequently, and importance in Spain, an oe is killed for the fake of the hide and tallow. In an improved fate of society, on the contrary, the land and forces become considerably inferior to value to the carerule. ~~7/9~~ **Fish** is ~~in~~ **an** article, the ~~topply~~ **supply** of which is ~~conferably~~ **considerably** limited, as man ~~his~~ **has** no power of production in respect to it, though, by the exertion of ~~indultry,~~ **industry,** he can ~~colled~~ **collect** a greater quantity. Shoals of fish are generally ~~copions,~~ **copious,** but uncertain. ~~Metal~~ **Metals** and minerals are articles, the supply of which is not ~~perfectly~~ **precisely** limited, ~~was~~ **but** extremely uncertain. The ~~different~~ **discovery** of new mines, or the continuance of fertility in the old, are equally beyond the reach of calculation.

POLITICAL ECONOMY

POLITICAL ECONOMY. CHAP.II. _Of the Source of Wealth._ ALL wealth arises from three ~~fourores;~~ **fources;** it is either produced by the ~~fenomenous beauty~~ **fpontaneous bounty** of nature, or it is the fruit of human ~~industry,~~ **indutry,** or it is generated by the judicious employment of a quantity of wealth previously accumulated. To the three heads then of ~~_land, laoborder_,~~ **land, labour,** and ~~copied,~~ **capital,** all national wealth may be ~~covered.~~ **referred.** Smith has ~~tested~~ **treated** of the revenue derived from thefe ~~these figures~~ **three fources** as forming the constituent parts of the price of commodities; and with regard to labour in particular, ~~repeated conflicts~~ **repeatedly confiders it** as the ~~way factor~~ **only fource** of ~~weakly.~~ **wealth.** According to the view, however, given ~~above a Book i~~ **above,** the price of all commodities ~~depend~~ **depends** entirely on the ~~pro-ch. v.vi.vic. persons~~ **proportion** between the ~~domestic~~ **demand** and the supply. ~~Laonos,~~ **Labour,** therefore, (and the ~~famone~~ **fame** may be ~~fast~~ **faid** of land and ~~opital),~~ **capital),** is only a means of furnishing or increasing a supply of ~~their~~ **those** articles for which there already ~~walks abroad,~~ **exists a demand,** and ~~the units~~ **unless** it be ~~beneficial to dooring,~~ **fuccefsful in fo doing,** the ~~most~~ **moft** severe labours will meet with no ~~remoneration~~ **remuneration** whatever. We ~~fulfill~~ **fhall** therefore proceed to consider the revenue which ~~arise~~ **arifes** from ~~the deficient causes,~~ **thefe different fources,** and the ~~circumstances~~ **circumftances** by which it is ~~increased~~ **increafed** or diminished. Sect. I. Land. All land which is not naturally ~~burren,~~ **barren,** and is ~~cultivated,~~ **cultivated** with any ~~cats, afterd~~ **care, affords** something more than is ~~necefary~~ **necessary** to pay the expense of labouring it. This ~~furplus~~ **surplus** goes as a ~~rest~~ **rent** to the ~~husband,~~ **landlord,** who, ~~or couldartion~~ **in consideration** of ~~or rejecting~~ **receiving** it without risk or trouble, ~~relinquilies~~ **relinquishes** to the ~~former~~ **farmer** the profits of cultivation. The proportion of the ~~producers~~ **produce** of ~~afield~~ **a field** which is to go ~~far away,~~ **for rent,** varies with different circumstances. The chief of ~~thefe~~ **these** is the fertility of the ~~foil,~~ **soil,** the extent of the ~~mask,~~ **market,** which enables the ~~producer~~ **produce** to be

~~disputed de~~ **disposed of** to greater advantage, the ~~property~~ **propriety** or poverty of the country, which ~~caules~~ **causes** a greater or ~~his~~ **less** demand for that produce, **and** the ~~average-field~~ **average skill** and activity of the ~~farnes,~~ **farmers,** which will enable them to turn the fertility of the ground to better account. It is almost ~~one-click~~ **needless** to ~~delivery,~~ **observe,** were ~~less~~ **it not** for the vague language often made use of upon this subject, that the rate at which farms let, ~~mutl, likeed~~ **must, like all** other commodities, ~~depred~~ **depend** altogether upon the demand and the ~~topply if it must~~ **supply. If much** is to be made by farming, many will bid for farms, and the rent will be ~~ruled~~ **raised** by their competition, and ~~now *early.~~ **vice versa.** The idea that all the ~~hundreds~~ **landlords** of an extensive country may combine to raise their rents, is altogether chimerical. Even could it take place, it could be accomplished only by a certain number of ~~trees~~ **them** allowing their ~~funds~~ **lands** to ~~to~~ **lie** waste, which, diminishing the ~~topply,~~ **supply,** would ~~doubtfe ratio~~ **doubtless raise** the rent of the cultivated lands. But we need not ~~first~~ **fear** that any ~~landlad~~ **landlord** should leave his lands in this condition, from a culpable ~~feheme~~ **scheme** of ~~ag-gremdizing~~ **aggrandizing** the ~~refill~~ **rest** of his body at his own expense, as well as that of the public. Land which produces food for ~~men~~ **man** will at all ~~three~~ **times** afford **rent** to the ~~landlad,~~ **landlord,** in proportion to its fertility, and the other circumstances mentioned above. Men multiply in proportion to the means of ~~fullerenes~~ **subsistence;** they have even a constant tendency to multiply beyond those means; hence there is always a full demand for this species
