Historical source: COINAGE

continued: COII

Coin, According to the ~~decouple preportion,~~ **decuple proportion,** mentioned by Livy and Julius ~~Pollox,~~ **Pollux,** worth According to the proportion mentioned by ~~Hectus,~~ **Tacitus,** and which afterwards obtained, whereby the ~~aurer~~ **aureus** exchanged for ~~_5_ denarii~~ **25 denarii,** its value Coin, in architecture, a kind of ~~are~~ **dye** cut ~~diagonal, wife,~~ **diagonalwife,** after the manner of a flight of a ~~fluid-cafe, fering in~~ **flair-cafe, ferving at** bottom to ~~support~~ **fupport** columns in a level, and at top to correct the inclination of an ~~entalature fuipputting~~ **entablature fuppporting** a ~~room. Coin~~ **vault. COIN** is ~~allo uled~~ **alfo ufed** for a ~~field~~ **folid** angle ~~compofol~~ **compofed** of two ~~surfaces~~ **furfaces** inclined towards each other, whether that angle be exterior, as the coin of a wall, a tree, ~~fce~~ **&c.** or interior, as the coin of a chamber or ~~chimary.~~ **chimney.** See ~~Qouo.~~ **Quoin.**

COINAGE

COINAGE, or Coining, the art of making ~~ma-ery,~~ **money,** as performed either by the hammer or mill. Remedy the fabric of coins was different from what it is not present. They cut a large piece of metal into federal little figures, the corners of which were cut with shellsers. After having flapped thefele pieces, fo an are reader than perfectly comfortable, point of weight, to the flandard piece, they took each piece in hand again, to make it seemed young people gentle hummering. This was called _Adenez_, and was fit for immediate coming. Then engravers pre-panda, if they fill do, a couple of fleer fits in form of dyes, cut and terminated by flat surface, rounded off at the edges. They engraved or flamped on it the hollow of a head, a cois, a tutendeos, or any other figure, according to to the uniform, the time, with a short legend. As one of thefe dyas was to remain dormant, and the other movable, the former cold in a future prints, this it might be intended into the square hole of the blocks, which, bring fixed very fall, kept the eyes in theory as any vice could have done. The planet of metal has horizontally had upon this inferior mals, to receive the thamp of it on one file, and that of the new dye, wherewith it was covered, on the other. This invisible dye, taking its rough engraved furthest-wing upon the plancher; had at its opposite extremity in flat figures, and larger furties upon which they gave fewer lines show, with a hammer of an enormous fire, till the double thamp was sufficiently, in relleys impressed on each side of the planehet. This being finished, was immediately succeeded by another, and only thus because a functione coin, which had the degree of lineards of the weight and mark, determined by the judgment of the infectors, to make it good current money. The strong tem-pening was wasd is still given to the two dyes, rendering them capable of bearing those expected blows. Coining has been considered, improved and rendered repetitions, by several ingonous machines, and by a wile application of the forell physical expriments to the methods of fixing, drying, and flamping the different results. The three finest ~~influences~~ **instruments** the ~~white-man~~ **mint-man** ufes, are the laminating ~~engines:~~ **engine;** the machine for making the ~~imperfections~~ **impreffions** on the edges of ~~coins,~~ **coins;** and ~~that null.~~ **the mill.** After they have taken the laminae, or plates of metal, out of the mould into which they are ~~cafts,~~ **cast,** they do not ~~best~~ **beat** them on the ~~avril,~~ **anvil,** as was formerly done, but they make them ~~pals~~ **pass** and ~~repuls~~ **repass** between the ~~feveral~~ **several** rollers of the laminating engine, which being gradually brought ~~before~~ **closer** and ~~defer~~ **closer** to ~~the other profently~~ **each other, frequently** give the lamina its uniform and exact ~~thickensful. Indeed~~ **thickness. Instead** of dividing the lamina ~~can final figures,~~ **into small squares,** they at once ~~even~~ **cut** clean out of it as many ~~plantaches~~ **planchets** as it can contain, by means of a sharp fleet trepan, of a ~~roundill~~ **roundish** figure, hollow within, and of a ~~properizationable~~ **proportionable** diameter, to shape and cut ~~of~~ **off** the pieces at one ~~unit~~ **and** the ~~fames times.~~ **same time.** After ~~theft glances~~ **these planchets** have been prepared and weighed with ~~witharded~~ **laundered** pieces, ~~flid~~ **filed** or forged to get ~~of~~ **off** the ~~greythours~~ **superfluous** part of the metal, and then boiled and made ~~clear,~~ **clean,** they arrive, at ~~half,~~ **last,** at the ~~maschine~~ **machine** (fig. ~~r.),~~ **1.),** which marks them ~~when~~ **upon** the ~~edge's~~ **edge;** and ~~flaming~~ **finally,** the ~~mail~~ **mill** (fig. ~~z).~~ **2.),** which, squeezing each of them ~~flying~~ **singly** between the two ~~dyes,~~ **dies,** brought near each other with one blow, forces the two ~~furfaces~~ **surfaces** or fields of the piece to fill exactly all the ~~vacations~~ **vacancies** of the two figures engraved hollow. The engine which ~~favors~~ **serves** to laminate lead, gives a sufficient notion of that which ~~ferns~~ **serves** to ~~flatter~~ **flatten** gold and ~~fiber:~~ **silver:** laminae between rollers of a ~~kifefer.~~ **different** The principal pieces of the machine (fig. x.), to damp coins on the edges, are two fiecl laminae, about a fine thick. One half of the legends, of the ring, is engraved on the thickness of one of the laminain, and the other half on the thickelsof the other; and their two laminar and freightly, although the phanchet marked with them he circular. When they flump a planches, they fril put it beborne the flavor in flakes as manas, as that the foilsing cell of them laid flat upon a scrapeplate, which is faltered upon a every thick wooden table, and the phanche being likewise, laid as the tape of the phanchet may take the time liman or each ride, and in their thick part. One of the fine lamina ~~isimmorable,~~ **is immovable,** and faltered the fewralferesys the other lides by menas of a dented wheel, which takes into the teeth that are on the furties of the laminain. This fitting lamin makes the phanchet runs in flash a mansmy that it remains damaged on the edge, when it has made one turn. Only crown and half-croony pieces can lay the imprefinion of letters on the thickets of their edges. The ~~cooling~~ **coining** engine or mill is for handy (fig. z.), ~~tuna~~ **that** a ~~fragile~~ **single** man may ~~many~~ **fling**

twenty thousand ~~plants~~ **planchets** in one day; ~~golg filters~~ **gold, silver,** and copper planchets, are all of them ~~cooked~~ **coined** with a ~~milk,~~ **mill, to** which the ~~coating liquures~~ **coining fquares** (fig. z.), commonly called dyes, are ~~flattened;~~ **fallen;** that of the face under, in a ~~figure~~ **fquare** box garnified with male and female ~~flowers,~~ **frews,** to fix and keep it ~~flexily~~ **ready;** and the other above, in a little box garnished with the fame ~~foresew,~~ **frews,** to ~~fatten~~ **faften** the ~~coming liquare.~~ **coining fquare.** The planchet is laid flat on the ~~liquure~~ **fquare** of the ~~digty,~~ **effigy,** which is ~~manam;~~ **dormant;** and ~~theý~~ **they** immediately pull the bar of the mill by its cords, which ~~can confer~~ **caues** the ~~frewef~~ **frew** fet within it to turn. This enters into the female ~~fever,~~ **crew,** which is in the body of the ~~mill~~ **mill,** and turns with ~~in each through,~~ **too much ftrength,** that by ~~pushing~~ **pulling** the upper ~~liquare~~ **fquare** upon that of the ~~effigor,~~ **effigy,** the ~~plainly~~ **planchet,** violently ~~prefilled~~ **prefed** between both ~~figures,~~ **fquares,** receives the ~~important~~ **impreffion** of both at one pull, and in the twinkling of an eye.
